INTRODUCTION

On April 25, 28, and 29, 2008, WRA, Inc. conducted a complete tree survey of the General Mills site in Vallejo (Project Area), Solano County, California (Figure 1). This survey included all trees with diameter at breast height (DBH) larger than 6 inches for the purposes of completing a tree disposition plan for proposed development of the site. Each tree was assessed for species, DBH, canopy radius, overall condition, health, and structural condition. Additionally all trees were mapped with sub-meter accuracy GPS receivers. A map of all surveyed trees is presented in Appendix A. The complete tree survey data table is presented in Appendix B.

General Project Area Description

The Project Area is a former flour mill complex and an adjacent hillside in Vallejo, Solano County, California. It is bordered to the east and north by residential and commercial development. To the south, there is a small area of open space, predominately non-native grassland. The Project Area is bordered on the west by Mare Island Strait. Elevations in the Project Area range from 0 to 140 feet (0 to 43 meters).

The hillside in the eastern portion of the site has a southwestern aspect and is undeveloped with the exception of a residence and associated buildings. The southern portion of the hillside supports groves of exotic ornamental trees, dominated by acacia (*Acacia* spp.), eucalyptus (*Eucalyptus* spp.), and pines (*Pinus* spp.). A few scattered native trees are present, including coast live oak (*Quercus agrifolia*) and toyon (*Heteromeles arbutifolia*). The residence area supports several species of ornamental trees. The western portion of the site supports a fairly young plantation of pine, acacia, and cedar (*Cedrus deodara*) trees.

METHODS

On April 25, 28, and 29, 2008 the Project Area was traversed on foot to inventory all trees 6 inches and larger within the Project Area boundary. WRA staff arborist Julie Rentner (ISA# WE-7742A) traversed the entire Project Area on foot and recorded relevant tree information and locations.

Each tree was identified by species, size (DBH measured at 4.5 feet above the ground at grade), average crown radius (the average of three crown radius measurements taken in different directions from the trunk), and approximate location. General notes on the condition of trees were taken. Trunk locations were mapped for each tree.

The general condition of each tree was assessed by evaluating health and structure through visual investigation. The health and structure of each tree were scored individually prior to assignment of an overall condition score. Notes regarding tree health or structure were recorded when appropriate. Assessment of the general condition, health, and structure of each tree was conducted according to the following rating narratives:

Table 1. Rating narratives for tree assessment	
General Condition	
good	Tree shows condition of foliage, bark, and overall structure characteristic of the species and lacking obvious defect or disease
fair	Tree shows condition of foliage, bark, and overall structure characteristic of the species with some evidence of stress, defect, or disease
poor	Tree shows condition of foliage, bark, and overall structure uncharacteristic of the species with obvious evidence of stress, defect, or disease
Health	
good	Tree is free from symptoms of disease and stress
fair	Tree shows some symptoms of disease or stress including twig and small branch dieback, evidence of fungal / parasitic infection, thinning of crown, or poor leaf color
poor	Tree shows symptoms of severe decline
Structure	
good	Tree is free from major structural defects
fair	Tree shows some structural defects in branches but overall structure is stable
poor	Tree shows structural failure of a major branch or codominant trunk

RESULTS

A total of five hundred twenty-three (523) trees were inventoried in this assessment. A complete list of all trees surveyed is presented in Appendix B. No trees surveyed were native to this region of California with the exception of coast live oak (*Quercus agrifolia*), and toyon (*Heteromeles arbutifolia*). One toyon measuring over 6 inches DBH and seven coast live oaks were inventoried. Tree locations are shown in Appendix A. A summary of tree species observed is presented in Table 2.

Species	# surveyed	Species	# surveyed
blue gum eucalyptus	199	peppermint gum eucalyptus	4
white ironbark eucalyptus	66	callery pear	4
blackwood acacia	61	southern magnolia	2
Monterey pine	55	Mexican fan palm	2
aleppo pine	31	English walnut	2
red gum eucalyptus	28	rose locust	1
brown gum eucalyptus	13	ornamental birch	1
silver wattle acacia	12	toyon	1
Canary Island pine	9	western chokecherry	1
deodar cedar	8	casacara buckthorn	1
coast live oak	7	Canary Island date	1
Australian beech	6	Oregon crabapple	1
incense cedar	6	London plane	1
